

Integrated Management Systems Policy

Integrated Management Systems Policy

Meeting customer needs and expectations at the highest level is a priority. Continuous improvement is achieved by keeping up with technological advancements and integrating climate change considerations into all management system processes.

Teamwork drives progress toward company and departmental goals. Innovative and creative approaches are encouraged, supported by training programs that enhance technical and behavioral competencies.

Compliance with all applicable national and international laws, regulations, and conformity requirements is maintained.

Employee participation is essential to fulfilling the requirements, objectives, and continuous improvement of Occupational Health and Safety, Environmental, and Quality Management Systems.

Risks related to workplace accidents and occupational diseases are systematically identified and minimized. These risks are addressed effectively through employee involvement to ensure safe and healthy working conditions.

Efficient use of natural resources, energy, and raw materials is a key focus.

Commitments to preventing environmental pollution and reducing negative environmental impacts are upheld through continuous improvement efforts.

Designing value-added products remains a core goal, contributing meaningfully to the national economy.
