

# Energy Management Policy

Pireks is committed to aligning its operations and services with the principles of energy management, a fundamental aspect of sustainability. Efforts are directed toward continuously improving energy performance throughout all activities.

To achieve this goal, the following principles are embraced in every operation:

- Ensuring efficient and effective energy use in all activities and reducing natural resource consumption.
- Considering climate change in all energy management processes.
- Enhancing the performance of energy management systems, minimizing energy resource consumption, developing projects to reduce energy use, and ensuring continuous improvement.
- Designing energy-efficient systems for new products, processes, modernization efforts, and investments.
- Operating in full compliance with national laws, regulations, and conformity requirements.
- Promoting energy awareness among all stakeholders, starting with employees, through effective communication.
- Prioritizing energy-efficient products in equipment and service procurement.

Together with all employees, Pireks pledges to fulfill the requirements of this policy by sustaining efforts and investments.
